Urban Forest 2027 Expansion Program Tree Species List

	***Agonis flexuosa* commonly known as WA Peppermint Tree** Height: 10–15 m Spread: 10–15 m Agonis flexuosa is a graceful, weeping tree endemic the Perth and southwest coastal region of Western Australia. Its aromatic, peppermint-scented leaves and white spring flowers make it a sensory delight. This tree supports local wildlife and offers strong urban canopy benefits, combining beauty, resilience, and ecological value in one long-lived package.
	***Eucalyptus todtiana* commonly known as Coastal Prickly Bark or Dwutta** Height: 10–15 m Spread: 5–10 m Endemic to the Swan Coastal Plain, Eucalyptus todtiana is an important local Eucalypt. It is tough and adaptable tree suited to sandy soils and coastal conditions. It's rough bark and creamy white flowers attract native fauna, supporting local biodiversity.
	***Eucalyptus victrix* commonly known as Western Coolabah or Little Ghost Gum** Height: 4–8 m Spread: 4–6 m Native to northern Western Australia this small tree grows to around 8m with distinct smooth white bark and an irregular spreading canopy. The Little Ghost Gum has blue green leaves, conical fruit and small creamy white flowers that appear in the summer with a sweet scent, attracting birds and insects. Highly drought-tolerant and adaptable, its compact form provides ideal shade for small spaces.
	***Macadamia tetraphylla* commonly known as Macadamia** Height: 8 – 15 m Spread: 8 –10 m Native to eastern Australia, the Macadamia tree is a lush, evergreen tree known for its glossy foliage and edible nuts. It offers a dense canopy that provides excellent shade, contributes to urban cooling, and provides a critical food source for endangered Black Cockatoo species.

	***Melaleuca viridiflora* commonly known as Broad-leaved Tea Tree** Height: 8–12 m Spread: 6– 8 m Melaleuca viridiflora is a hardy WA native tree with soft, papery bark and creamy white to greenish flowers. It thrives in a variety of soil conditions, including poorly drained areas, making it ideal for challenging urban sites. Its dense canopy provides excellent shade and habitat for birds and insects.
	***Pistacia chinensis* commonly known as Chinese Pistachio** Height: 6 – 10 m Spread: 6 – 8 m A hardy, deciduous shade tree with a rounded canopy and attractive grey-brown bark. Glossy green, pinnate foliage transforms into brilliant shades of orange, red and yellow in autumn, creating a striking seasonal display. It is highly valued for its drought tolerance, resilience to heat and pollution, and ability to provide excellent shade
	***Tristaniopsis laurina* commonly known as Water Gum or Kanooka** Height: 6–12 m Spread: 5–10 m Eucalyptus torquata, indigenous to Western Australia, is a compact and hardy tree known for its brilliant coral-pink flowers that bloom in clusters. It's small size and ornamental appeal make it a favourite for verges and small gardens.
