

Street Tree Species Guide

Botanical Name: *Agonis flexuosa*

Common Name: WA Peppermint

Origin: Endemic to the coastal areas of south west Western Australia. Generally found within 10Km of the coastline.

Description: A medium evergreen tree with a weeping, domed shaped form. Fibrous brown bark with long dull green leaves and white flowers with 5 petals in clusters. This tree is the natural understorey of Tuart forest and was found from Lancelin to Dunsborough. It is a local native to the western side of the City of Melville and performs well as a street tree, responding well to pruning.
