Tips to Reduce Emissions

GREENING THE EVIRONMENT

- Use Water Corporation or Perth NRM's waterwise garden or verge design tool online
- Plant local and heat resistant trees to reduce the amount of water used
- Plant trees to provide shade, improve air quality and reduce stormwater runoff
- Identify bright spaces in your home to move the garden inside

FOOD

- Choose local and seasonal produce
- Reduce food waste by monitoring portion sizes, encouraging take-away or composting
- Reduce consumption of dairy products and red meat because cows, sheep and goats generate significant amounts of methane gas which contributes to global warming
