

Why Electrify your home?

Save Money

The economics have changed - we now can SAVE MONEY while saving the planet! A fully electric home can save up to \$3500 PER YEAR by using modern, efficient, electric devices.

Healthier and more resilient homes

Modern electric appliances provide efficient heating, cooling and cooking while improving indoor air quality.

Cut Emissions

Household choices account for 42% of Australia's emissions, and electrification is one of the fastest ways to reduce them.

Make a plan

Next time something needs replacing, choose electric. One appliance at a time. No pressure to do it all at once.

What's possible for your home?

Enter a few details and see your potential savings.

You can use these calculators:

Grid Electricity → Solar and Battery

Melville City Climate Action Network Inc.

is a grass-roots, non-profit, non-partisan community organisation run by volunteers who share their personal experience in Electrifying their own homes.

We are your neighbours and fellow residents on the journey of trying to make changes to improve our quality of life from the air we breathe to the homes we live in.

Join local people taking practical climate action in our community.
